

Website Requirements: Genting Tour Management System

Prepared for Marry Holiday | System Functional Specification & Proposal

This document details the functional specifications for the web management platform built for Marry Holiday's daily Genting Highlands tour operations. The system centralizes trip tracking, driver and tour leader assignments, passenger rosters, and up-to-date passenger return classifications into a single accessible interface.

1. Daily Bus and Tour Management

Client Requirement: Marry Holiday needs to manage and monitor scheduled daily trips to Genting Highlands.

Proposed System Solution: A central daily operations board recording bus identifiers, passenger totals, assigned drivers, and assigned tour leaders for each departure.

For each scheduled bus trip, the system records and displays:

- **Bus Number / Bus ID:** Unique identifier assigned to each coach for the trip.
- **Total Passengers:** Total number of passengers assigned to the bus for the selected trip.
- **Tour Leader:** Staff member assigned to manage group coordination.
- **Bus Driver:** Authorized driver operating the assigned bus.
- **Complete Passenger List:** Roster of all passengers booked on that vehicle.

2. Bus Passenger Management

Operations staff can inspect passenger counts and manifest allocations per bus. Clicking on any bus entry opens the full passenger roster, vehicle details, and staff assignments.

Each bus summary card presents key operational metrics at a glance:

- Bus Number / Identifier
- Total Passengers
- Assigned Tour Leader & Driver
- Direct drill-down access to view individual passenger names and trip arrangements

OPERATIONAL EXAMPLE: BUS OVERVIEW CARD

- Bus Identification: Bus 01
- Total Passengers on Board: 30
- Assigned Tour Leader: John
- Assigned Driver: Ah Seng
- Action: Staff can click on Bus 01 to view the full 30-passenger roster and status breakdown.

3. Tour Leader Management

Client Requirement: Each bus must have an assigned Tour Leader so staff can identify who is responsible for each group.

Proposed System Solution: The system records Tour Leader names and links them to daily bus trips. Additional contact details may also be included to support operational communication if required by Marry Holiday.

The system records the following core fields:

- **Tour Leader Name (Confirmed):** Full name of the assigned leader.
- **Assigned Bus (Confirmed):** Specific coach assigned for the morning departure and return trip.
- **Assigned Tour / Trip (Confirmed):** Scheduled date, departure time, and destination.
- **Contact Details (Proposed Operational Field):** Direct phone number for dispatchers to contact on-ground leaders.

4. Bus Driver Management

Client Requirement: Each bus must have an assigned driver so dispatchers know who is driving each vehicle.

Proposed System Solution: The system links drivers directly to vehicle trips. Vehicle registration plates and driver mobile numbers can be included as proposed operational fields to support vehicle readiness.

The driver registry records:

- **Driver Name (Confirmed):** Full name of the operating driver.
- **Assigned Bus (Confirmed):** Internal bus identifier linked to the daily schedule.
- **Assigned Trip / Date (Confirmed):** Date of operation and scheduled departure timings.
- **Vehicle Plate & Phone (Proposed Operational Fields):** Commercial plate number and direct mobile contact.

5. Passenger List and Record Keeping

Client Requirement: Marry Holiday needs a complete list of passengers for each bus with individual passenger names recorded.

Proposed System Solution: A structured manifest table per bus displaying passenger sequence numbers, passenger names, and their travel status.

Sample Passenger Manifest (Bus 01):

No.	Passenger Name	Trip Status
1	Ali	Staying in Genting
2	Tan Ah Kow	Returning Same Day
3	Lim Mei Mei	Staying in Genting
4	Wong Wei	Returning Same Day

6. Passenger Stay and Return Status Tracking

Client Requirement: Marry Holiday needs to distinguish passengers staying in Genting from passengers returning on the same day so Tour Leaders can prepare the correct return passenger count.

Proposed System Solution: Each passenger has an assigned Stay or Return status in the trip record. The dashboard automatically groups passengers into separate Staying and Returning lists and calculates the totals for each category.

Category A: Staying in Genting (Overnight Guests)

- Passengers remaining in Genting Highlands for hotel accommodations.
- The system generates a dedicated list of staying passengers so tour leaders do not expect them for the return bus.
- Displayed with clear green status tags for quick visual recognition.

Category B: Returning on the Same Day

- Passengers scheduled to take the return coach back on the same date.
- The system creates an active return manifest for the driver and tour leader during afternoon assembly.
- Displayed with distinct orange/amber status tags to verify return headcounts.

OPERATIONAL BENEFIT: ELIMINATING ROLL-CALL CONFUSION

- Separating guests into distinct digital manifests prevents coaches from waiting for passengers who are staying overnight.
- Tour Leaders and Drivers can view filtered manifests directly on mobile devices without relying on handwritten notes.

7. Daily Fleet Overview Dashboard

Client Requirement: Marry Holiday needs a single daily overview of all buses and passengers.

Proposed System Solution: A consolidated summary table displaying all active buses, passenger counts, staying/returning breakdowns, and overall fleet totals.

Daily Operations Summary Table:

Bus ID	Total Pax	Tour Leader	Driver	Staying	Returning
Bus 01	30	John	Ah Seng	18	12
Bus 02	25	Jason	Ah Lim	10	15
Bus 03	32	Mary	Ah Kow	20	12
Total (3 Buses)	87 Pax	-	-	48 Pax	39 Pax

Selecting any row navigates directly to that bus's passenger roster, allowing staff to view names and verify whether each passenger is staying or returning.

8. Proposed User Interface and Screen References

The following screens are conceptual references intended to illustrate the proposed system flow. Final layouts may be refined based on Marry Holiday's operational feedback during development.

8.1 Daily Overview Dashboard & Trip Detail Screen

This conceptual screen provides the master operational view with date navigation, total passenger counters, and bus status tables. Clicking any bus opens the trip roster.

Figure 1: Proposed Daily Overview Dashboard, Bus Detail View, and Passenger Breakdown

- Summary Counter Cards: Automatically updated badges for Total Buses (3), Total Passengers (87), Staying in Genting (48), and Returning Same Day (39).
- Search and Date Filters: Allows staff to filter by specific date, bus number, driver name, or tour leader.
- Trip Breakdown: Clean tabbed layout separating passengers into Staying and Returning lists.

8.2 Grouped Manifest View & Optional Coach Seating Layout

The primary objective of the system is identifying which passengers are on which bus. For operations where seat allocation is required, an optional visual coach seating layout is also supported.

Figure 2: Two-Column Grouped Manifest, Passenger Details, and Optional Seating Map

- Side-by-Side Manifests: Separate lists for Staying guests (Green) and Returning guests (Orange), with optional passenger phone contacts.
- Optional Feature: Visual Coach Seating Layout: Can be activated if Marry Holiday decides to assign individual physical seats on coaches.
- Mobile Optimized: Tour leaders can view passenger lists and verified arrangements directly on mobile devices during boarding and assembly.

8.3 Fleet and Driver Administration

Reference concepts for administrator modules to manage vehicle records, driver profiles, and scheduling rosters.

Figure 3: Reference Concept for Fleet Management Interface

Figure 4: Reference Concept for Bus Listing and Schedule Management

9. Indicative Project Timeline and Delivery Milestones

The following five-week timeline illustrates the proposed implementation schedule. The timeline is subject to timely receipt of client information, feedback, and approvals at each review stage.

Timeline	Phase / Stage	Core Deliverables & Objectives
Week 1	Phase 1: Project Setup & Asset Preparation	Collect sample passenger sheets from Marry Holiday, setup cloud hosting and database schema, establish brand styling.
Week 2	Phase 2A: Fleet & Schedule Engine	Build master bus registry, driver profiles, tour leader schedules, and daily trip dispatcher console.
Week 3	Phase 2B: Manifests & Status Tracking	Build passenger list modules, Staying vs. Returning classification tags, summary tally counters, and mobile views.
Week 4	Phase 3: Staging Review & Client Feedback	Deliver working staging website to Marry Holiday team, run pilot test with real trip records, collect consolidated feedback.
Week 5	Phase 4: Refinements, Training & Go-Live	Apply agreed adjustments, conduct walkthrough for tour leaders and dispatchers, officially launch for daily use.

10. Requirements from Marry Holiday (Preparation Checklist)

To keep development on schedule and ensure the platform mirrors your exact operational routines, Marry Holiday will provide the following items prior to Week 1 development:

- **1. Sample Booking Sheets:** 2 to 3 sample passenger manifests in their current format (Excel or CSV) to verify passenger columns, phone numbers, and booking codes.
- **2. Fleet and Staff Roster:** A list of regular buses (plate numbers, seating capacities), active drivers with phone numbers, and tour leader names.
- **3. Brand Assets:** Official company logo files (high-resolution PNG or vector) and preferred company color guidelines.
- **4. Primary Project Lead:** A designated team member from Marry Holiday who will coordinate reviews, test the staging platform, and consolidate staff feedback.

11. Client Feedback and Review Process

A structured review process prevents project delays and ensures Marry Holiday's staff are confident using the system from day one:

- **Live Staging Access:** At the end of Phase 2 and Phase 3, Marry Holiday will receive access to a private staging environment populated with sample tour data.
- **Consolidated Review Window:** Marry Holiday will have 3 to 5 business days per review checkpoint to test the system with drivers and tour leaders, compiling notes in a single consolidated feedback list.
- **Scope Alignment:** Minor interface refinements such as label changes, status colours, and reasonable table-filter adjustments can be addressed during the agreed review period. Requests that introduce new modules, workflows, or integrations will be assessed separately.
- **Future Additions:** Optional Passenger Check-in: If Marry Holiday later decides to log active boarding attendance, a digital check-in module (Pending → Checked In) can be introduced as a separate Phase 2 enhancement.

12. Proposed System Features and Technical Approach

The platform is engineered as a responsive web application designed for multi-device access across dispatch offices and active coaches:

- Multi-Device Responsive Design: Operates smoothly on smartphones for tour leaders, tablets for dispatchers, and desktop computers.
- Role-Based Access: Dedicated login levels for Administrators, Tour Leaders, and Drivers to protect operational records.
- Instant Search and Filtering: Real-time lookups by passenger name, bus number, or contact number without reloading the page.
- Print and Export Support: One-click generation of printable daily manifests and digital PDF summaries for offline backups.

Project Sign-off and Proposal Acceptance:

Please review the requirements, deliverables, and timeline above. Upon mutual signature, development will commence according to the agreed milestone schedule.
